AI AND ML PROJECT

AI Daily Routine Analyzer Project

The AI Daily Routine Analyzer is a machine learning project that analyzes a person's daily habits and predicts whether their routine is Good, Average, or Poor. The system uses a Decision Tree Classifier to learn patterns from routine data and provide suggestions for improving lifestyle habits.

Features:

1. Predicts routine quality (Good / Average / Poor)
2. Uses Decision Tree Machine Learning algorithm
3. Takes user input for daily habits
4. Validates user input ranges
5. Provides personalized suggestions
6. Simple and interactive command line interface

Technologies Used

1. Python
2. Pandas
3. Scikit-learn
4. Machine Learning (Decision Tree Classifier)

The model takes the following inputs:

1. Sleep hours
2. Water intake (glasses)
3. Exercise minutes
4. Screen time (hours)
5. Study hours
6. Meals per day
7. Wake up early (Yes/No) Output

The system predicts:

Good Routine Average Routine Poor Routine
And provides suggestions for improvement.

Machine Learning Model

This project uses a Decision Tree Classifier which is a supervised machine learning algorithm used for classification problems. The model is trained on routine data and learns patterns between lifestyle habits and routine quality.

How to Run:

1. Install Python
2. Install required libraries:
   .pip install pandas scikit-learn
3. Run the Python file: python routine_analyzer.py
